AIR FILTERS from Stens THE PARTS COMPANY

Get the best performance and longest engine life with properly maintained mowers.

• High quality, durable filters that fit snugly to **eliminate air flow leaks**

• Replace your filter when dirty or at the manufacturer's recommended schedule

• **Smart choice** over OEM filters

AIR FILTERS

Want to increase your mower efficiency?

- Change your air filter every 25 hours of use or at least once a year
- Replace filters more frequently if in dirty or dusty conditions
- Oil the foam air filter if recommended by the OEM
- Replace worn or damaged filters immediately

Stens Foam Filters — GREAT Quality!

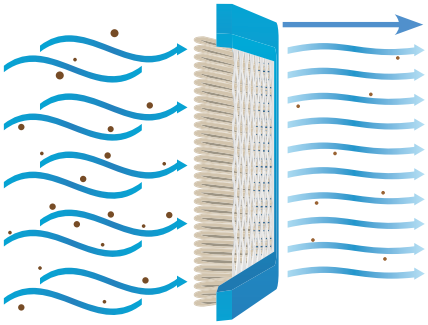

- Between 55–65 PPI (pores per inch), which meets OEM PPI standards . . . and at a better price than OEM filters
- Provides 97% of void space with very high degree of permeability
- Provides clean and consistent air flow

Stens Air Filters — GREAT Quality!

- Meets or exceeds OEM filter media specifications
- Panel filter frame is made of the same urethane content as the OEM to ensure sealing in filter housing — Some aftermarket filters do NOT use urethane
- Wire meshing prevents filter from crushing in round filters and prevents large material from damaging the media

- Inner screen provides support and prevention of paper chafing from vibration in round filters

HANDY HINTS

DEBRIS IN FUEL. Deposits rapidly form in the fuel tank and fuel delivery systems as ethanol fuels age. However, ethanol is also a powerful solvent that will strip away and disperse this build -up back into the fuel as large, performance-robbing particles. This leads to clogged filters, injectors and carburettors.

SOLUTION: Star Tron's® enzymes break down debris into sub-micron sized particles that can be easily burned during the combustion process, restoring full performance.

Ethanol fuels tend to damage carburettors faster.

Use these simple guidelines to know when to fix the carburettor or save time and just replace it.

A full replacement carburettor recommended when:

- You need a quick fix.
- You need to minimize the labour hours of a job, a simple unbolt and replacement is recommended.
- A new carburettor is easy to find and not costly.

Carburettor kits recommended when:

- A new carburettor is hard to find or no longer available.
- A new carburettor is cost prohibitive.

HANDY HINT — To help your carburettor handle ethanol blended fuels better, see page 967 for Star Tron recommended additives.

HANDY HINTS

PROBLEM: Carburettor troubles even after a rebuild?
You could have a leaky needle and seat.
POSSIBLE CAUSES:
1. Fuel line debris. When rebuilding a carburettor, replace the fuel line. Fuel line dries out and cracks. Small debris from this deterioration can enter the carburettor causing the needle and
seat to leak.
2. Dirt in the fuel Always drain old fuel and clean tank before adding fresh fuel after rebuilding the carburettor. Dirt in the fuel can cause the needle and seat to leak.

Stens' Own Brand – Best Value

made by an original plug manufacturer

WIDER-BASE INSULATOR
Unique design provides a wider, easier path to speed the transfer of heat.

THERMAL-BONDING
A specially developed compound between the centre electrode and the insulator nose helps to move heat through and away from the plug's firing end.

COPPER-NUCLEUS CENTRE-ELECTRODE
Pure copper inside the chrome-nickel electrode transfers combustion heat away rapidly.

LONGER INSULATOR NOSE
Can tolerate up to twice the amount of combustion deposits before fouling.

EXCLUSIVE NICKEL-ALLOY
Rapidly transfers heat from firing end of plug, protects the electrode core and resists erosion and corrosive elements of combustion.

HANDY HINTS

HANDY HINT — *SPARK PLUG TIGHTENING PROCEDURES:*

Bosch recommends when installing spark plugs to use a torque wrench and the correct torque in ft.-lbs. listed below. If a torque wrench is not available, hand tighten the plug until it is seated in the cylinder head. Spark plugs with gaskets should be tightened 90°. Spark plugs with tapered seats should be tightened an additional 15°. NOTE: Avoid overtightening or undertightening as spark plugs or engine damage may result.

#1 TRUTH about using aftermarket parts:

What the OEM's don't want you to know is that in many cases switching your parts purchases to aftermarket parts can be the single most beneficial choice you make for your company.

It's true! Purchasing aftermarket parts instead of original equipment parts can bring numerous benefits to your business.

1. Guaranteed quality — Can't get past the fact that aftermarket is just not the original part? Most aftermarket parts come with a full one year guarantee while most original parts come with a 90 day guarantee. Most companies do this because they source products that meet or, in some cases, exceed OEM requirements. In fact, some aftermarket parts are sourced from the very same supplier that the OEM uses. A standard the aftermarket industry has proudly been vigilant of for decades.

2. One part for numerous applications — Many parts in the outdoor power equipment industry will fit multiple applications. This allows you to accommodate a variety of brands and applications with less inventory and dollars tied up on your shelves.

3. Profit Builders — Aftermarket parts usually come at a lower price than the original, branded part. You pay a lot for that original manufacturer brand name and packaging. Is it really worth it? If the part performs the same, why not save your business money? By the way, that's money that goes directly to your bottom line. In fact, you can save enough money to pass some along to your customer. Don't want to make the switch universally? Give your customers the choice of which part they would like, original or aftermarket. This leads to a trusting relationship where customers appreciate the personalised service option.

Offer your customers the best.

Double wrapped belt with a tough inner Aramid cord.

ARAMID CORD BELTS

- Aramid cord belts have the highest strength to weight ratio. Two to three times higher than other organic fibres.
- Lower elongation eliminates resetting/retensioning of the aramid cord belts.
- Belts manufactured using aramid cord offers reduced belt thickness and lower belt weight.
- Aramid cord belts offer higher strength and negligible elongation.

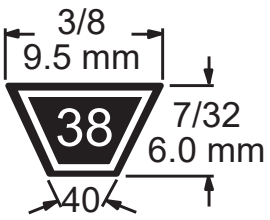

3/8" (9.5mm) BELTS

- Oil and heat resistant
- For heavy-duty applications

HANDY HINTS

BELT MEASURER

- An excellent tool in determining the replacement belt needed
- Measures FHP, power rated, A and B belts up to 100" (2540mm)
- Measures outside circumference of belt
- Reads in 1/2" (12.7mm) increments

PART NO. 752-998

NOTE: 3/8" (9.5mm), 1/2" (12.7mm), 5/8" (15.9mm) and 4L belts are measured by outside circumference. A and B series belts are measured by inside circumference.

Our 248 series belts are identical to an “A" section belt except for call length. For an “A" section application add 2 inches(50.8mm) to the “A" belt reference number; for a “B" section application add 3 inches(76.2mm) to the “B" reference number and order that length in our series.

FOR EXAMPLE: An A68 belt is 70 inches long; therefore, order our 248-070 belt. A B68 belt is 71 inches long; therefore, order our 258-071 belt.

Belt cross references are in the OEM Cross Reference Chart in the back of the catalogue.

STENS PACKAGING

- 100% recyclable, environmentally friendly
- Tamper proof
- Ensures kit sets are complete with no missing parts
- The packaged blades have a low profile, allowing more blade sets per display hook
- Easy to read fitting and safety instructions on the back of the packs
- Allows customer to see and compare parts for correct product match
- Australian made packaging

- Made in Australia
- Made from CK1055 steel sourced from New Zealand
- Hardened in Australia in a controlled atmosphere furnace to match the steel grade and then tested
- Tempered to 43-45 Rockwell (a strength determined to be ideal for mower blades) and then tested for hardness and ductility

HANDY HINTS

Help your customers get the right blade by teaching them to measure correctly.

A. Measure the blade straight from centre of bolt hole to cutting edge for its length.

B. Measure the blade from the top to bottom for its width.

BUNDLING — STENS' BLADES ARE IN CONVENIENT BUNDLES OF SIX.

The blade "six pack" is a great sales tool! You can offer your customers a "six pack' of blades, instead of just a single set of two or three blades. Simply order in multiles of six to take advantage of the Stens "six pack". The bundling is also a great environmental alternative to boxes!

Balance your blade at each sharpening for the best cut and to keep equipment in top working condition.

- Excessive vibration will cause blade to crack and potentially break
- May decrease bearing and spindle life

B. Measure the width at the widest part of the blade.
C. Measure the CENTRE hole.
D. Measure the CENTRE to CENTRE distance between the outer holes.
E. Refer to our OEM Cross Reference in the back of this catalogue if the OEM blade number is stamped into the blade.

HANDY HINTS

HOW OFTEN SHOULD I SHARPEN MY EDGER BLADE?

Never. When an edger blade wears down, it needs to be replaced. Each time an edger blade is replaced, the guide bar should be replaced as well.

For edgers with an adjustable blade guide, always keep the guide adjusted to within 1/4" of the level of the blade. This can save wear and tear on the blade and sidewalk.

HANDY HINTS

Most applications that mount directly to the crankshaft use a “CCW" for standard mount (pulley away from engine). A “CW" rotation is normally used for reverse mounting (pulley towards engine). If a clutch is mounted incorrectly then the springs will be run in compression and it will cause the springs to fail.

REPLACING CLUTCHES — Install mounting bolt and retaining washer and torque to spec for the clutch to work properly. Use Grade 5 or Grade 8 bolt only. Minimum torque:

7/16"(11.1mm) UNF bolt is 50ftlb/67 Nm
3/8"(9.5mm) UNF bolt is 31ftlb/42 Nm
M10x1.5 bolt is 35ftlb/48 Nm

WARNING—Anything less than required mounting torque could result in clutch failure, thus voiding warranty.

Stens THE PARTS COMPANY

BEARINGS AND BUSHINGS

Keep Equipment Wear At A Minimum

With Quality Stens Bearings and Bushings

Double Grooved Bearing — Inner and outer races have grooves for balls to roll for heavier loads at higher RPM.

Tapered Roller Bearing — Works well for radial and axial loads by absorbing impact and shock loads with ease when fitted properly.

Pillow Block Bearing — Bolt down flange allows shafts to be mounted with fit-up, but little machining.

Single Grooved Ball Bearing — Ball bearings have inner and outer race, with grooved inner race and cage holding the rolling ball. Radial loads are supported and have a much lower thrust load.

Needle Bearing — Smaller axles on rollers reduce contact friction and function at higher speeds than regular bearings.

Stens bearings and bushings are designed and engineered to endure the rugged conditions of outdoor power equipment applications.

HANDY HINTS

Sizing pneumatic tyres can be confusing. However, when mapped out, sizing can be simple. Methods of sizing are common in the lawn and garden industry and described below:

1. B-C-D (4.10-3.50-4)
   B is the overall section of width of the tyre.
   C is the height of the tyre measure from the peak of the tyre to the bead.
   D is the rim diameter.

2. A-B-D (13-5.00-6)
   A is the overall diameter of the tyre.
   B is the overall section width of the tyre.
   D is the rim diameter.

3. A-B (20x2.125)
   A is the overall diameter of the tyre.
   B is the overall section width of the tyre.

SIZE	TYPICAL USE
(B) (C) (D) 4.10x3.50-4	Industrial Go-karts

SILVER STREAK TRIMMER LINE

COPOLYMER LINE

A polymer made by reaction of 2 different monomers, with units of more than one kind. A blend of 2 different materials.

COPOLYMER LINE
General purpose trimming

Fire™

Fire™ trimmer line is a round shape that is durable against concrete and trees. The intense red colour stands out against the landscape when breakage occurs.

COPOLYMER LINE
General purpose trimming

Stealth™

Stealth™ trimmer line is a round shape that is durable against concrete and trees. The green color blends into the landscape when breakage occurs.

COPOLYMER LINE
Medium to heavy-duty trimming

Buzz™

Buzz™ trimmer line is a precise square shape providing 4 cutting edges for a clean cut in tall, thick and heavy weed conditions.

COPOLYMER LINE
Medium to heavy-duty trimming

Edge™

Edge™ trimmer line has 6 cutting edges which provide more mass for long wear and delivers a clean cut instead of tearing. The green colour blends into the landscape when breakage occurs.

CO-EXTRUDED LINE

Made by a simultaneous extrusion of 2 or more different, yet compatible, materials through the same dye. Co-extruded lines provide a durable, soft, flexible inner core for strength surrounded by a tough, long wearing outer shell, giving a longer wear life and decrease in line breakage, fraying and line welding.

CO-EXTRUDED LINE
Medium trimming

Ninja™

Ninja™ trimmer line is perfect for medium size jobs where a professional finish is required. It is a long lasting, multipurpose line that is great for landscapers and residential use.

CO-EXTRUDED LINE
Heavy-duty trimming

Optimum™

Optimum™ trimmer line provides 6 cutting edges, allowing more material mass for long wear and delivers a clean shear cut for less browning of grass tips. Quick and efficient cutting in more tall, thick and heavy weed conditions.

CO-EXTRUDED LINE
Heavy-duty trimming

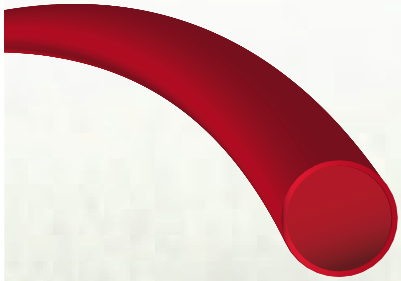

Razor™

Razor™ trimmer line provides 5 cutting edges, allowing more material mass for long wear and delivers a clean shear cut for less browning of grass tips. With this line, you get improved fuel efficiency, reduced noise levels and trimmer vibrations. Delivers the most professional looking results.

HANDY HINT — *SAW CHAIN PITCH*
The word pitch actually means size. The larger the pitch, the larger the saw chain. Pitch is determined by measuring the distance between the centre lines of three consecutive rivets and dividing the distance in half. For example, 3/8" pitch saw chain (.375") measures 3/4" (.750") between the centre lines.

HANDY HINTS

SAFETY TIPS — Operating a chainsaw is inherently hazardous. Potential injuries can be minimized by using proper personal protective equipment and safe operating procedures.

Before Starting a Chainsaw

Check controls, chain tension and all bolts and handles to ensure that they are functioning properly and that they are adjusted according to the manufacturer's instructions. Make sure that the chain is always sharp and the lubrication reservoir is full. Start the saw on the ground or on another firm support. Drop starting is never allowed. Start the saw at least 10 feet from the fueling area, with the chain's brake engaged.

Lapping Compound

TRUE GRIT

Advantages

- Environmentally safe abrasive compound
- Contaminant-free product through use of electronic-grade water
- pH neutral product can be easily washed off with a common garden hose
- Formulated with precisely enough viscosity to permanently suspend the abrasive
- Tackiness additives keep the product on the blades, not on the floor or technician
- Lubricant dissipates heat on the blades, minimizing warping
- Rust inhibitors minimize corrosion
- Industrial diamond provides faster cutting action with a sharper edge

Hardwood Augers

- Promac hard wood augers are designed especially for Australian hardwood.
- Coarse thread doesn't clog and makes for much faster penetration at low revs approximately 250RPM.
- Two horizontal edges with very obtuse angles on cutting head, they last longer reducing sharpening and increasing amount of work between sharpens.
- Available in full range of sizes from 10mm—32mm with overall length of 450mm.
- Extensions are also available
